

19CSE205 – Program Reasoning

Jevitha KP

Lecture 11, 12, 13 –

Forward vs Backward Reasoning,
Weakest Preconditions – Conditionals

Credits

- Adapted from :
 - Dr. Bharat Jayaraman, University of Buffalo, CSE449-459 Software verification course, Spring 2020.

Sample Code

- $x = 17;$
- $y = 42;$
- $z = x + y;$
- Write the facts that are true at every point in the program

Assertion

- { true }
- $x = 17;$
- $y = 42;$
- $z = x+y;$

Assertion

- { true }
- $x = 17;$
- { $x = 17$ }
- $y = 42;$
- $z = x + y;$

Assertion

- { true }
- $x = 17;$
- { $x = 17$ }
- $y = 42;$
- { $x = 17 \wedge y = 42$ }
- $z = x + y;$

Assertion

- { true }
- $x = 17;$
- { $x = 17$ }
- $y = 42;$
- { $x = 17 \wedge y = 42$ }
- $z = x+y;$
- { $x = 17 \wedge y = 42 \wedge z = 59$ }

Assertion

- An assertion is a logical formula inserted at some point in a program.
- It is presumed to hold true at that point in the program.

Precondition and Postcondition as Assertions

- A **precondition** is an assertion inserted prior to execution
- A **postcondition** is an assertion inserted after execution.
- {true} is the precondition
- { $x = 17 \wedge y = 42 \wedge z = 59$ } is the postcondition.
- All other assertions are called **intermediate assertions**.
- They serve as steps as you reason between precondition and postcondition, Eg: like the intermediate steps in a math problem to solution.

Forward reasoning

- Previous example - forward reasoning.
- Simulated the execution of the program, considering each statement in the order they would be executed.
- Disadvantage - assertions may accumulate a lot of irrelevant facts as you move through the program.
- Don't know which parts of the assertions will come in handy to prove something later and which parts won't.
- End up listing everything we know about the program.

Backward Reasoning

- When we write a block of code, we have a clear idea of what's supposed to be true after it executes (ie) we know the postcondition already,
- To prove that the expected postcondition will indeed hold true given the appropriate precondition.
- For this reason, backward reasoning is often more useful than forward reasoning – **Weakest precondition**

Backward Reasoning Process

- Push the postcondition up through the statements to determine the precondition.
- Start by writing down the postcondition you want at the end of the block.
- Then look at the last statement in the block and ask, "For the postcondition to be true after this statement, what must be true before it?"

Backward Reasoning Process

- Keep going until you've reached the top of the statement list.
- Whatever must be true before the first statement is the precondition.
- It is guaranteed that if this precondition is satisfied before the block of code is executed, then the postcondition will be satisfied afterward.

Example

- $x = y;$
- $x = x + 1;$
- $\{ x > 0 \}$

Example

- $x = y;$
- $\{ x + 1 > 0 \}$
- $x = x + 1;$
- $\{ x > 0 \}$

Example

- $\{ y + 1 > 0 \}$
- $x = y;$
- $\{ x + 1 > 0 \}$
- $x = x + 1;$
- $\{ x > 0 \}$

- False case:
- Eg: if $y = -1$ - if precondition is false
- $x = -1$ ($x = y$)
- $x = 0$ ($x = x + 1$)
- $x = 0$ - post condition ($x > 0$) is also false

- True case:
- Eg: if $y = 2$ - if precondition is true
- $x = 2$ ($x = y$)
- $x = 3$ ($x = x + 1$)
- $x = 3$ - post condition ($x > 0$) is also true

Weakest Preconditions for conditional statements

Conditional Statements

- Statement : `if (B) S1 else S2`
- How do we define : `WP(if (B) S1 else S2, O)`
 - If-Part: _____
 - Else-Part: _____

Conditional Statements

- Statement : if (B) S1 else S2
- Defining WP : $\text{WP}(\text{if (B) S1 else S2, O})$
 - If-Part: $\text{wp}(\text{S1}, \text{O})$
 - Else-Part: $\text{wp}(\text{S2}, \text{O})$

Conditional Statements

- Statement : if (B) S1 else S2
- Defining WP : $\text{WP}(\text{if (B) S1 else S2, O})$
 - If-Part: $\text{wp}(\text{S1}, \text{O})$
 - Else-Part: $\text{wp}(\text{S2}, \text{O})$
- $\text{WP}(\text{if (B) S1 else S2, O}) =$

Conditional Statements

- Statement : if (B) S1 else S2
- Defining WP : $\text{WP}(\text{if (B) S1 else S2, O})$
 - If-Part: $\text{wp}(\text{S1}, \text{O})$
 - Else-Part: $\text{wp}(\text{S2}, \text{O})$
- $\text{WP}(\text{if (B) S1 else S2, O}) =$
 $\text{B} \implies \text{wp}(\text{S1}, \text{O})$
 $\&\&$
 $\text{not}(\text{B}) \implies \text{wp}(\text{S2}, \text{O})$

Conditional Statements

- Statement : if (B) S1
- How do we define : $\text{WP}(\text{if (B) S1}, \text{O})$
 - If block : _____
 - Else block : _____

Conditional Statements

- Statement : if (B) S1
- How do we define : $\text{WP}(\text{if (B) S1}, \text{O})$
 - If block : $\text{wp}(\text{S1}, \text{O})$
 - Else block : O

Conditional Statements

- Statement : if (B) S1
- How do we define : $\text{WP}(\text{if (B) S1}, \text{O})$
 - If block : $\text{wp}(\text{S1}, \text{O})$
 - Else block : O
- $\text{WP}(\text{if (B) S1}, \text{O}) =$
 $\text{B} \implies \text{wp}(\text{S1}, \text{O})$
 $\&\&$
 $\text{not}(\text{B}) \implies \text{O}$

Another definition of WP for Conditional Statements

- $WP(\text{if } (B) \text{ } S1 \text{ else } S2, O) =$
 $B \ \&\& \ wp(S1, O)$
 \parallel
 $\text{not}(B) \ \&\& \ wp(S2, O)$
- $WP(\text{if } (B) \text{ } S1, O) =$
 $B \ \&\& \ wp(S1, O)$
 \parallel
 $\text{not}(B) \ \&\& \ O$

Checking Equivalence

- We can check **equivalence** between:
- $B \ \&\& \text{wp}(S1, O) \parallel \text{not}(B) \ \&\& \text{wp}(S2, O)$ and
- $(B \implies \text{wp}(S1, O)) \ \&\& (\text{not}(B) \implies \text{wp}(S2, O))$
- Abbreviate:
- $\text{wp}(S1, O) \rightarrow P$
- $\text{wp}(S2, O) \rightarrow Q$

Checking Equivalence

- We can check **equivalence** between:
 - $B \ \&\& \text{wp}(S1, O) \parallel \text{not}(B) \ \&\& \text{wp}(S2, O)$ and
 - $(B \implies \text{wp}(S1, O)) \ \&\& (\text{not}(B) \implies \text{wp}(S2, O))$
-
- Using Alt-Ergo, we can quickly check equivalence :
 $(B \ \&\& P) \parallel (\text{not}(B) \ \&\& Q) \iff$
 $(B \implies P) \ \&\& (\text{not}(B) \implies Q)$

Checking Equivalence

```
1 logic p,q,b: prop
2
3 goal a:
4   (b and p) or (not(b) and q) <=>
5   (b -> p) and (not(b) -> q)
```

```
File "try-alt-ergo-file", line 4, characters 5-68: Valid (0.1060) (7 steps)
(goal a)
```

Example - 1

- Output condition : $x \geq 0$
- Input condition : $i=0$
- Program:

If($i \geq 0$) then

$x = i$;

else

$x = -i$;

Find WP and check $I \Rightarrow WP$.

Example - 1

- $O: x \geq 0$; $B : i \geq 0$; $S1: x = i$; $S2: x = -i$;
- $WP(\text{if}(B) S1 \text{ else } S2, O)$
- $b \implies wp(S1, O) \ \&\& \ \text{not}(b) \rightarrow wp(S2, O)$
- $WP(S1, O) = (x \geq 0)\{x = i\} = (i \geq 0)$
- $WP(S2, O) = (x \geq 0)\{x = -i\} = (-i \geq 0) = (i \leq 0)$
- $(i \geq 0) \implies (i \geq 0) \ \&\& \ \text{not}(i \geq 0) \implies (i \leq 0)$
- $(i \geq 0) \implies (i \geq 0) \ \&\& \ (i < 0) \implies (i \leq 0)$
- Alternative WP:
- $(i \geq 0) \ \&\& \ (i \geq 0) \parallel (i < 0) \ \&\& \ (i \leq 0)$

Example - 1

- WP Ans:
- $i \geq 0 \Rightarrow (i \geq 0) \ \&\& \ (i < 0) \Rightarrow (i \leq 0)$

$I \Rightarrow WP$

- $i = 0 \Rightarrow (i \geq 0) \Rightarrow (i \geq 0) \ \&\& \ (i < 0) \Rightarrow (i \leq 0)$

Alternative $I \Rightarrow WP$

- $i = 0 \Rightarrow (i \geq 0) \ \&\& \ (i > 0) \ || \ (i < 0) \ \&\& \ (i \leq 0)$

Alt-ergo

goal a:
forall i: int.
(i = 0) ->
 (i >= 0 -> i >= 0)
 and
 (i < 0 -> i <= 0)

```
1  
2 goal a:  
3 forall i: int.  
4  
5 (i = 0) ->  
6   ((i >= 0) -> (i >= 0)) and ((i < 0) -> (i <= 0))  
7 |
```

File "try-alt-ergo-file", line 4, characters 1-72: Valid (0.1060) (1 steps)
(goal a)

Alt-ergo – Alternative WP

goal a:

forall i: int.

(i = 0) ->

(i >= 0 and i >= 0)

or

(i < 0) and i <= 0)

```
1 goal a:
2 forall i: int.
3
4 (i = 0)
5   ->
6     ((i >= 0) and (i >= 0))
7     or
8     ((i < 0) and (i <= 0))
```

File "try-alt-ergo-file", line 2, characters 1-89: Valid (0.0960) (1 steps)
(goal a)

Example - 2

- $\text{If}(x < 5)$
- $x = x * x$
- else
- $x = x + 1$
- $O : x \geq 9$
- $B \Rightarrow \text{wp}(S1, O) \ \&\& \ \text{not}(B) \Rightarrow \text{wp}(S2, O)$
- $B : (x < 5)$
- $\text{WP}(S1, O) = x \geq 9 \{x = x * x\} = x * x \geq 9$
- $\text{WP}(S2, O) = x \geq 9 \{x = x + 1\} = x + 1 \geq 9 = x \geq 8$
- $(x < 5) \Rightarrow (x * x \geq 9) \ \&\& \ \text{not}(x < 5) \Rightarrow (x \geq 8)$
- $(x < 5) \Rightarrow (x * x \geq 9) \ \&\& \ (x \geq 5) \Rightarrow (x \geq 8)$

Example 2 – Alt-Ergo

- WP : $(x < 5) \Rightarrow (x * x \geq 9) \ \&\& \ (x \geq 5) \Rightarrow (x \geq 8)$
- $I : x = 3$
- $I \Rightarrow \text{WP}$
- $(x = 3) \Rightarrow (x < 5) \Rightarrow (x * x \geq 9) \ \&\& \ (x \geq 5) \Rightarrow (x \geq 8)$
- Alt-ergo:
 - logic x:int
 - goal a:
 - (x=3) ->
 - (x < 5 -> x*x >= 9)
 - and
 - (x >= 5 -> x >= 8)

```
1 logic x:int
2
3 goal a:
4 (x=3) ->
5   (x<5) -> (x*x>=9)
6   and
7   (x>=5) -> (x>=8)
```

File "try-alt-ergo-file", line 4, characters 1-69: Valid (0.1230) (2 steps)
(goal a)

Example 2 – Alt-Ergo

- Alt-ergo: Invalid
- logic x:int
- goal a:
- (x=2) ->
- (x<5 -> x*x>=9)
- and
- (x>=5 -> x>=8)

```
1 logic x:int
2
3 goal a:
4   (x=2) ->
5     (x<5 -> x*x>=9)
6     and
7     (x>=5 -> x>=8)
```

File "try-alt-ergo-file", line 4, characters 5-81: I don't know (0.1270) (3 steps) (goal a)

Example - 3

if($x \neq 0$)

$z = x$

else

$z = x + 1$

• $O : z > 0$

- $B \Rightarrow WP(s1, o) \ \&\& \ \text{not}(B) \Rightarrow wp(s2, o)$
- $Wp(s1, o) = z > 0 \ \{z = x\} = x > 0$
- $Wp(s2, o) = z > 0 \ \{z = x + 1\} = x + 1 > 0$
- $(x \neq 0) \Rightarrow x > 0 \ \&\& \ \text{not}(x \neq 0) \Rightarrow x + 1 > 0$
- $WP: (x \neq 0) \Rightarrow x > 0 \ \&\& \ (x = 0) \Rightarrow x + 1 > 0$
- $WP: (x \neq 0) \ \&\& \ x > 0 \ \parallel \ x = 0 \ \&\& \ x > -1$

Example 3 – Alt-ergo

- WP: $(x \neq 0) \Rightarrow x > 0 \ \&\& \ (x = 0) \Rightarrow x + 1 > 0$
- I : $x = 2$
- Alt-ergo : (\neq should be written as $<>$ in Alt-Ergo)
- $x = 2 \rightarrow$
- $(x <> 0 \rightarrow x > 0)$
- And
- $(x = 0 \rightarrow x + 1 > 0)$

```
1 logic x:int
2
3 goal a:
4   (x=2) ->
5     (x<>0 -> x>0)
6   and
7     (x=0 -> x+1>0)
```

File "try-alt-ergo-file", line 4, characters 5-88: Valid (0.1180) (2 steps)
(goal a)

Example 3 – Alt-ergo

- WP: $(x \neq 0) \Rightarrow x > 0 \ \&\& \ (x = 0) \Rightarrow x + 1 > 0$
- I : $x = -1$
- Alt-ergo : (\neq should be written as $<>$ in Alt-Ergo)
- $x = -1 \rightarrow$
- $(x <> 0 \rightarrow x > 0)$
- And
- $(x = 0 \rightarrow x + 1 > 0)$

```
1 logic x:int
2
3 goal a:
4 x=-1 ->
5   (x<>0 -> x>0)
6   and
7   (x=0 -> x+1>0)
```

File "try-alt-ergo-file", line 4, characters 1-63: I don't know (0.1160) (3 steps) (goal a)

Example 4

```
if(a==b)
    b = 2*a+1
else
    b = 2*a
O : b>1
```

- $B \Rightarrow WP(s1, o) \ \&\& \ \text{not}(B) \Rightarrow wp(s2, o)$
- $Wp(s1, o) = b > 1 \ \{b = 2*a + 1\} = 2*a + 1 > 1$
- $Wp(s2, o) = b > 1 \ \{b = 2*a\} = 2*a > 1$
- $(a=b) \Rightarrow 2*a + 1 > 1 \ \&\& \ \text{not}(a=b) \Rightarrow 2*a > 1$
- WP: $(a=b) \Rightarrow 2*a > 0 \ \&\& \ \text{not}(a=b) \Rightarrow 2*a > 1$
- WP: $(a=b) \ \&\& \ 2*a > 0 \ || \ \text{not}(a=b) \ \&\& \ 2*a > 1$

Example 4 – Alt-Ergo

- $l : a = 2 \text{ and } b = -1$
- $(a=2 \text{ and } b=-1) \Rightarrow ((a=b) \ \&\& \ 2*a>0) \ || \ (\text{not}(a=b) \ \&\& \ 2*a>1)$
- Alt-ergo:
- `logic a,b:int`
- `goal g1:`
- $(a=2 \text{ and } b=-1) \rightarrow$
 - $((a=b) \text{ and } 2*a>0)$
 - or
 - $((a<>b) \text{ and } 2*a>1)$

```
1 logic a,b:int
2
3 goal g1:
4 (a=2 and b=-1) ->
5   ((a=b) and 2*a>0)
6   or
7   ((a<>b) and 2*a>1 )
```

File "try-alt-ergo-file", line 4, characters 1-82: Valid (0.1320) (3 steps)
(goal g1)

Example 4 – Alt-Ergo

- $l : a = -1 \text{ and } b=2$ - Invalid
- $(a=-1 \text{ and } b=2) \Rightarrow (a=b \ \&\& \ 2*a>0) \parallel (\text{not}(a=b) \ \&\& \ 2*a>1)$
- Alt-ergo:
- `logic a,b:int`
- `goal g1:`
- $(a=2 \text{ and } b=-1) \rightarrow$
 - $((a=b) \text{ and } 2*a>0)$
 - or
 - $((a<>b) \text{ and } 2*a>1)$

```
1 logic a,b:int
2
3 goal g1:
4 (a=-1 and b=2) ->
5   ((a=b) and 2*a>0)
6   or
7   ((a<>b) and 2*a>1 )
```

File "try-alt-ergo-file", line 4, characters 1-82: I don't know (0.1210) (3 steps) (goal g1)

Comparison of Multiple-if vs Else-if

```
@requires marks = 75
@ensures grade = B
@program {
    grade = F;

    if (marks > 50) grade = C;
    if (marks > 70) grade = B;
    if (marks > 90) grade = A;
}
.
```

```
@requires marks = 75
@ensures grade = B
@program {
    if (marks > 90)
        grade = A;
    else if (marks > 70)
        grade = B;
    else if (marks > 50)
        grade = C;
    else grade = F;
}
.
```

Which one is easy to verify???

Multiple-if

If (a == b)

S1;

If (b == c)

S2;

If(c == a)

S3;

How many execution paths??

Multiple-if

If (a == b)

S1;

If (b == c)

S2;

If(c == a)

S3;

Work out here...

A=1,b=2,c=3 --> None

A=1,b=1,c=3 --> S1

None

S1

S2

S3

All

Multiple-if

If (a)

S1;

None

S1

If (b)

S2;

S2

S3

If(c)

S3;

S1,S2

S1,S3

S2,S3

S1,S2,S3

Multiple-if

If (a == b)

S1;

If (b == c)

S2;

If(c == a)

S3;

$$2^n$$

Multiple-if

- How many execution paths??

```
@requires marks = 75
@ensures  grade = B
@program {

    grade = F;

    if (marks > 50) grade = C;
    if (marks > 70) grade = B;
    if (marks > 90) grade = A;
}
.
```

Multiple-if

```
@requires marks = 75
@ensures  grade = B
@program {

    grade = F;

    if (marks > 50) grade = C;
    if (marks > 70) grade = B;
    if (marks > 90) grade = A;
}
.
```

- How many execution paths??
- S1
- S1,S2
- S1,S2,S3
- S1,S2,S3,S4

Multiple-if

```
@requires marks = 75
@ensures  grade = B
@program {

    grade = F;

    if (marks > 50) grade = C;
    if (marks > 70) grade = B;
    if (marks > 90) grade = A;
}
.
```

- How many execution paths??
- S1
- S1,S2
- S1,S2,S3
- S1,S2,S3,S4

Multiple-if

if (B1)
 s1;

if (B2)
 s2;

{O}

Try to derive the weakest
precondition for this program

Multiple-if

```
if (B1)
    s1;
{(B2 && wp(s2,O)) || (not B2 && O)}
if (B2)
    s2;
{O}
```

Multiple-if

$\{(B1 \ \&\& \text{wp}(s1,P)) \parallel (\text{not } B1 \ \&\& P)\}$

if (B1)
 s1;

$P = \{(B2 \ \&\& \text{wp}(s2,O)) \parallel (\text{not } B2 \ \&\& O)\}$

if (B2)
 s2;

{O}

Multiple-if

```
{(B1 && wp(s1,{  
(B2 && wp(s2,O))  
|| (not B2 && O)  
}))  
||  
(not B1 && {  
(B2 && wp(s2,O)) || (not B2  
&& O))}  
}
```

- Larger the number of execution paths, greater is the size of verification conditions.
- The size of verification condition generated increases exponentially (eg. For n cases, its 2^n)

Else-if

```
If(B1)  
    S1;  
else if(B2)  
    S2;  
..  
..  
Sn;
```

- How many execution paths for n cases ?

Else-if

```
If(B1)  
    S1;  
else if(B2)  
    S2;  
..  
..  
Sn;
```

- How many execution paths for n cases ?

ONLY n paths!

s1 or s2 or s3 orsn

Else-if

```
If(B1)
  S1;
else if(B2)
  S2;
else if(B3)
  S3;
..
else
  Sn;
```

```
B1 && wp(S1,O)
|| not(B1) && B2 && wp(S2,O)
|| not(B1) && not(B2) && B3 && wp(S3,O)
..
..
..
not(B1 || B2 || ... || Bn-1) && wp(Sn,O)
```

Increase in size of VC generated is linear

Comparison

```
@requires marks = 75
@ensures  grade = B
@program {

    grade = F;

    if (marks > 50) grade = C;
    if (marks > 70) grade = B;
    if (marks > 90) grade = A;
}
.
```

```
@requires marks = 75
@ensures  grade = B
@program {
    if (marks > 90)
        grade = A;
    else if (marks > 70)
        grade = B;
    else if (marks > 50)
        grade = C;
    else grade = F;
}
.
```

Else-if is easier to verify: smaller VC and less complex (grade is assigned exactly once)
